PROFESSIONAL SUMMARY

As an accounting graduate with a keen interest in technology, I am seeking a role as a Junior or Intern Front End Engineer. While my background is in accounting, I have always been interested in the creative side of technology, including web design and development. With experience in HTML, CSS, and JavaScript, as well as familiarity with front-end frameworks like React js, I am eager to apply my skills to a career in web development.

In addition to my work experience, I have completed several online courses in front-end development, including a certification in Web Design from Udemy. In my free time, I enjoy working on personal projects, such as creating a website for a local non-profit organization.

I am a detail-oriented and analytical individual with excellent problem-solving skills, which I believe will be valuable in front-end development. I am excited to learn from experienced developers and continue building my skills in web development.
